

In-Class Activity #2 – Exploring Directory Structures

Name: Dahn Bi Chong

Questions:

1. Assume you are in the **index.html** file, and want to edit the links in the navbar. Specifically, what would the path be to link to the **about.html** page?
 - a. Answer: /about.html, or about.html
2. Assume you are in the **index.html** file, and want to apply CSS to the page. What would the path be to link to the **index.css** file?
 - a. Answer: /css/index.css, css/index.css
3. What element would you put that path in? (Give the full element). Where would it go in the index.html file?
 - a. Element: <link>
 - b. Location in HTML file: Head
4. Find where the **codepoetry2021.html** file is located in the repo. What sub-directory (folder) is it in?
 - a. Answer: Projects
5. Imagine you wanted to add a link back to the **index.html** file in the **codepoetry2021.html** file. What would the path to that file be?
 - a. Answer: /index.html or ../index.html
6. What about applying some CSS – namely that same **index.css** from before. What would the path be to correctly link to that file, from the **codepoetry2021.html** file?
 - a. Answer: /css/index.css or ../css/index.css
7. There's a file called **headshot** somewhere in the repo. Where is it?
 - a. Answer: assets
8. What would the path be to add that **headshot** file to the **index.html** file? What would the full element be? Where would it go in the **index.html** file?
 - a. Path: assets/headshots/...
 - b. Full Element: <script></script>
 - c. Location in HTML file: Head
9. The **contact.html** page is a good place to add external links. What would the path be to add a link to the front page of the New York Times? What type of path is this?
 - a. Path: https://www.nytimes.com
 - b. What type of path: Absolute
10. What is going on in the **_data** sub-directory? Namely, what type of files are there (what is a .yml file)? Where on Anthony's site do you think the contents of those files display (take a guess, based on the names of the files)? *You might need to look at Anthony's actual website.*
 - a. What is a .yml file: Just a way of sorting data, used for recent news items
 - b. Where is the data in those files displayed: News

11. What about the **_includes** sub-directory? What do you think the files in that sub-directory accomplish, based on their titles? *You might need to look at Anthony's actual website.*
 - a. Where do the files in the _includes sub-directory appear: links items together and styled together
